

Clean-up Database Tables

Introduction

A number of database tables can quickly grow in size and impact on system performance. In order to manage these tables, it is possible to schedule deletion of any records older than a configurable time period.

The tables impacted are:

- gateway_logs
- nodes_battery
- messages_in
- relay_logs
- sensor_graphs – **not configurable, fixed to delete any records older than 24 hours.**
- bus_controller_log **(ONLY IF EBUS OR EMS CONTROLLER SCRIPTS ARE IN USE)**

Enabling the Feature

The feature can be setup and enabled from Settings/System Maintenance/DB Cleanup.

DB Cleanup

Enable periodical database cleanup, select time of day to execute and set the Interval Value and Period (as HOUR, DAY, WEEK or MONTH)

☒ Enable Cleanup

Execute
Cleanup At:

02:00

Enable or disable the feature and select the time at which the clean-up will occur.

Table Name	Value	Period
messages_in	2	DAY
nodes_battery	3	MONTH
gateway_logs	3	DAY
relay_logs	2	DAY
bus_controller_logs	1	DAY

Select the time interval for each table. after which the records will be purged from the database.

Last Run: 2026-08-27 08:30:00

Close

Save

Indication of the time at which the last clean-up was performed and whether successful or not.
